Education

Oregon State University, BS Computer Science

Expected Dec 2025

GPA: 4.0 | Software Engineering I, Operating Systems, Data Structures, Intro to Databases, Web Development, Algorithms, Assembly

University of North Florida, BFA

Apr 2012

GPA: 3.18

Experience

Teaching Assistant: Data Structures | Oregon State University

Apr 2024 - Present

- Collaborated with faculty to optimize learning for a cohort of 300+ students, boosting overall course performance.
- Mentored students during 6 large data structures projects dealing with complex concepts such as AVL trees and hash maps.
- Facilitated discussions and provided technical support during biweekly office hours, delivering one-on-one support to 60+ students

Equipment Technician & Consultant | Georgie's Ceramic & Clay Co.

Oct 2016 - Present

- Analyzed data to troubleshoot equipment issues, accomplishing a 95% resolution rate and increasing client satisfaction.
- Led monthly technical workshops, attracting an average of 100+ participants each year, fostering community engagement, resulting in an improvement in knowledge retention.
- Partnered with a diverse team of 5+ specialists to elevate client experiences, using user-centric problem-solving strategies.

Technical Skills

Languages: Python, JavaScript, HTML, CSS, SQL, Assembly, C

Libraries/Frameworks: React, Node.js, Express.js, Chakra UI

Tools/Platforms: Git, GitHub, MS Office, Figma, Jira, Postman

Databases: MongoDB, MariaDB, MySQL

Projects

Game: Chess GUI

github.com/SandKat214/Chess

Python, Pygame

- Coded a chess board in Python using the Pygame library, improving interface accuracy by designing a coordinate system.
- Applied object-oriented programming to organize the system, making it easy to update and scalable.
- Enabled mouse-based piece movement and added a pawn promotion feature to improve player interaction.
- Added a pop-up messaging feature to deliver immediate feedback on player moves and game outcomes, enhancing the experience.

Website: Web Dev Portfolio

github.com/SandKat214/WebDevPortfolio

JavaScript, HTML, CSS, React, Express.js, Node.js, MongoDB

- Created a website for art collection management using React and CSS for front-end styling, cutting loading times and enhancing user experience.
- Employed a RESTful API, boosting data handling efficiency and refining user accessibility.
- Utilized Node.js and MongoDB for efficient backend operations and data storage.

Website: CareLink

github.com/SandKat214/CareLink

JavaScript, React, Express.js, Node.js, MongoDB, Chakra UI, Figma, Cloudinary

- Developed a secure patient management and scheduling app using React for a responsive user interface, and MongoDB for storing patient data, appointments, and history.
- Coded 4 microservices (login authentication, calendar management, email notifications, and image storage) in Node.js, improving modularity and maintainability.
- Collaborated with a 3-person team to build and optimize 1 microservices, following agile practices to ensure efficient development.
